Submitted as a project document for the Salesforce CRM implementation.

1. Introduction

A CRM Application for TheChaiShop&Co is a Salesforce-based Customer Relationship Management system developed to manage customer, employer and enterprise records in one place. The project uses Salesforce custom objects, global picklists, record types, page layouts, validation rules, formula fields, email templates, flows, reports and dashboards to reduce manual work, automate billing calculations and improve customer engagement.

User Story

As a sales representative at TheChaiShop&Co, I want to manage customer relationships and streamline sales processes: access and update employer details, separate online and walk-in customers using record types, automate order quantity and total bill calculation, view reports and dashboards, and send automated birthday emails with special offers to customers.

2. Problem Statement

In a manual process, customer orders, billing and sales details are kept in registers and spreadsheets. This causes calculation errors, delayed and incomplete reports, data spread across multiple files and no timely communication with customers. The CRM provides one centralized Salesforce solution for these activities.

No.	User	Trying to	But	Because
PS-1	Sales Representative	Manage customer orders and billing	Calculations are often incorrect	Order quantity and billing are manual
PS-2	Store Manager	Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files
PS-3	Customer	Receive personalized offers and updates	I do not get timely notifications	There is no automated communication

3. Objectives

- Manage customer, employer and enterprise information in a centralized system.
- Separate online orders and walk-in orders using record types and page layouts.
- Automate order quantity and total bill calculation using formula fields.
- Use validation rules to prevent incorrect Aadhar, PAN and phone number data.
- Send automated birthday offer emails to customers using a scheduled flow.
- Create reports and a dashboard for sales monitoring and decision making.
- Provide role-based access through Salesforce security settings.

4. Technology Used

Area	Technology
Application / UI	Salesforce Lightning App (TheChaiShop&Co)

Database	Salesforce Custom Objects
Data Standardization	Global Picklist Value Sets
Validation	Validation Rules & Formula Fields
Automation	Schedule-Triggered Flow, Email Template & Email Alert
Reporting	Reports & Dashboards
Security	Profiles, Permission Sets & Role-based Access

5. Salesforce Data Model

The project uses three main custom objects: Employer Account, Customer Account and Enterprise Account. Customer Account and Enterprise Account are connected to Employer Account through the Associated Employer lookup relationship. Each object allows Reports, Activities, Field History tracking and Search.

Object	Main Purpose
Employer Account	Stores employee details: name, gender, phone, email, date of birth, Aadhar, PAN, designation and salary.
Customer Account	Stores customer details, address, chai and products purchased, payment mode, order quantity, total bill and birthday flag.
Enterprise Account	Stores enterprise name, contact details, address, items purchased, order quantity, total bill and payment mode.

Global Picklist Value Sets

Picklist	Values
Gender	Male, Female, Others
Type of Items	Tea powder, Cookies, Gift Hampers
Payment Mode	Gpay, PhonePe, Paytm, Credit or Debit card, Cash
Items	Tea powders, biscuits, cookies and gift boxes (17 products – see Appendix)

6. Main Features Implemented

- Employer Account, Customer Account and Enterprise Account custom objects.
- Custom tabs and the TheChaiShop&Co Lightning application.
- Global picklists for gender, items, type of items and payment mode.
- Custom fields, lookup relationships (Associated Employer) and multi-select picklists (Chai, Products purchased).
- Record types and page layouts: Online Order and Walk-In Order.
- Validation rules for Aadhar number, PAN details and phone number.
- Formula fields: Order Quantity, Total Bill and “Date of Birthday is today?”.
- Birthday Offer Email template and Happy Birthday email alert.
- Scheduled flow to send birthday emails automatically every day.
- Sales reports and the Customer Vs Enterprise Sales dashboard.

Validation Rules

Object	Rule	Purpose
Employer Account	Aadhar Number	Must be 12 numeric digits and must not start with 0.
Employer Account	PAN Number	PAN Details must not be blank, must not start with 0 and must not contain special characters.
Employer / Customer / Enterprise	Phone Number	Must be exactly 10 numeric digits (no spaces, dashes or brackets).

Automated Billing

Order Quantity counts the number of chai types and products selected on the record. Total Bill adds the price of every selected chai type and product. Both are formula fields, so they update automatically and need no manual calculation. Product prices are listed in the Appendix.

7. Automation / Flow Details

Component	Purpose
Formula: Date of Birthday is today?	Returns TRUE when today's day and month match the customer's Date of Birth.
Email Template: Birthday Offer Email	Text template with subject "Special Birthday Offer Inside!"; wishes the customer using the First Name merge field and offers 50% off with code HBDAY50.
Email Alert: Happy Birthday email alert	Sends the template to the customer's Email ID (object: Customer Account).
Flow: Happy Birthday Email Flow	Schedule-triggered flow, runs daily. Selects Customer Accounts where Date of Birthday is today = True and Email ID is not empty, then runs the email alert (Record ID = {!\$Record.Id}).

8. Reports and Dashboard

Reports created:

- Customer Account Sales Report – rows grouped by Record Type (Online Order / Walk-In Order) with a chart.
- Enterprise Account Sales Report – rows grouped by Type of Items with a chart.

The dashboard **Customer Vs Enterprise Sales** displays both reports as charts so that customer and enterprise sales can be compared at a glance.

9. Security Setup

- The TheChaiShop&Co Lightning app is assigned to the System Administrator profile.
- Role-based access is controlled with profiles and permission sets.
- Object-level and field-level security can restrict sensitive data such as salary, PAN, Aadhar and billing.
- Salesforce provides secure login authentication, encrypted storage and automatic cloud backups.

10. Testing

The project is tested by creating sample records and checking each feature. Screenshots of successful tests are maintained as project evidence.

- Record creation for Employer, Customer and Enterprise objects.
- Validation rule testing for Aadhar, PAN and phone numbers.
- Verification of record types and page layouts (Online Order, Walk-In Order).
- Formula field checks for Order Quantity and Total Bill.
- Flow execution for the birthday email alert.
- Report and dashboard generation.

12. Advantages and Limitations

Advantages	Limitations
Centralized data management Reduced manual work Automated calculations Improved customer engagement Real-time analytics	Requires a Salesforce license Depends on internet access Limited offline access

13. Conclusion

The CRM Application for TheChaiShop&Co brings employer, customer (online and walk-in) and enterprise data into one Salesforce system. It automates order quantity and billing, validates important data, sends birthday offers automatically and provides reports and a dashboard for decision making. The project demonstrates Salesforce administration features such as custom objects, relationships, record types, validation rules, formula fields, email automation with flows, reports and dashboards.

14. Future Scope

- Mobile CRM integration.
- AI-based sales prediction.
- WhatsApp / SMS alerts.
- Inventory management.
- Multi-branch support.
- Advanced customer profiling.

Appendix – Product Price List (used in Total Bill formula)

Product	Chai	Price (Rs.)
Platinum Tea Powder	TheChaiShop&Co Special Tea	70
Double Delight Tea Powder	Single Tea	50
Super Dust Tea Powder	Masala Tea	60
Osmania Biscuits (Value Pack)	Lemon Tea	40
Osmania Biscuits (Premium Pack)	Ginger Tea	55
Dry Fruit Biscuits	Green Tea	45
Fruit Biscuits	Sugar Free Tea	55
Salt Biscuits		
Multigrain Biscuits		
Ragi Biscuits		
Double Choco Chip Cookies		
Butter Almond Cookies		
Melting Moments Cookies		
Honey Oats Cookies		
Delight Box		
Signature Box		
Assorted Box
